

Sum

Jesús Chacón

January 2016

Job Description

This job compute the sum of the numbers in the input file. Each row is processed independently.

Input Required

The job expects a file with one or more rows of at least two numbers, separated by white spaces, e.g.:

```
2 8 4
65 3
48 99
```

Output Generated

A file *results.txt* is generated with the results of the computations. For each valid input row, the result of that row's sum is stored in a new line into the output file. E.g.:

```
14
68
147
```
